(a) Diagnose the conflict

Storms: packing + hierarchy cost

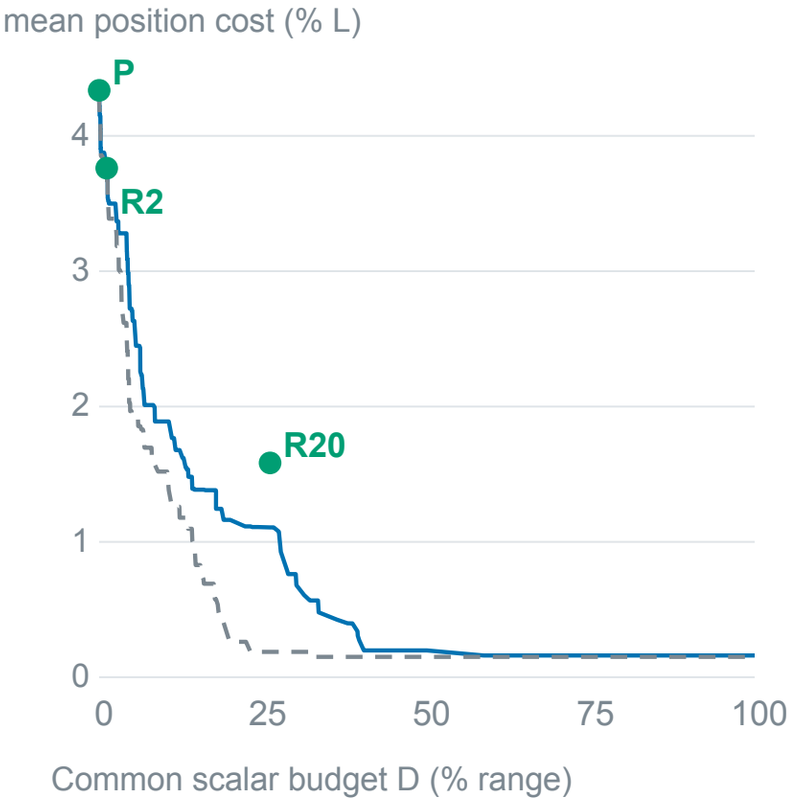

orange: τ* = packing + H

gray: free packing cost

f48: H = 8.45% L; packing = 0

(b) Position–scalar exchange

Storms: all 118 frames

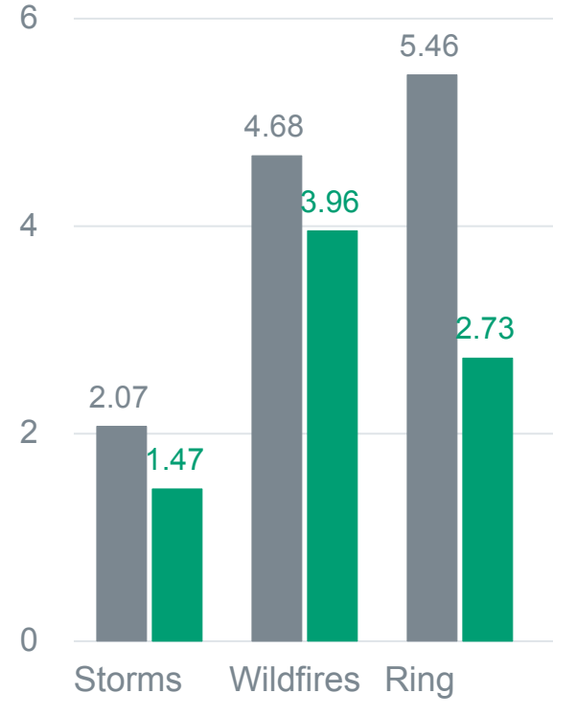

blue: exact mean attainable F

dashed: necessary lower bound Φ

green: selected-order optima

(c) Same order, better filling

Frame-mean scalar cost (% range)

gray: original-LCA filling

green: minimax barriers

No change of selected leaf order
